Applicant's amendment dated March 11, 2008, has been fully considered.

Applicant has amended the claims to overcome the previous rejections. However, a new ground of rejection has been made based on a newly discovered reference from further searches.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by US 5889336 (Tateishi).

Tateishi discloses a power plant comprising a floating body 1, a ballast 3, a pair of pulley housings 5 being connected with chain 4, said housings 5 are inside the floating body 1, the power plant obtains kinetic energy of up-and-down motion of waves and floating body 1 to rotate wheel housings 5 to drive a generator 11 to generate electric power, column 4, lines 21-35.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8-10 are rejected under 35 U.S.C. § 103(a) as being unpatentable over U.S. 5889336 (Tateishi) in view of U.S. 5359229 (Youngblood). Tateishi discloses all the claimed subject matter as set forth above in the rejection of claim 1, but does not disclose an intermediate float. Youngblood is relied upon to disclose it's well known to use intermediate float 58 between a surface float 1 and a ballast. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to provide an intermediate float in the system of Tateishi as taught by Youngblood for the purpose of achieving more stable movement.

Claims 3-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 3748

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
